

EMT-AeroMET

Aviation Meteorological Monitoring System Software

AEROMET Aviation Meteorological Monitoring System Software is another meteorological software by Enviromet Technologies that is suitable for Aviation Meteorology, Emergency Wind Display and Automatic Weather Observation System. This software is specially designed to be used with custom sensor, servers, workstation and easy to be integrated with external software or system.

Top Features:

- Run in Linux Centos 6 or latest.
 - MongoDB database (no SQL)
 - Provide Real-Time data
 - WMO and ICAO complied algorithm
 - Open interface for integration with any sensors, servers, workstations
- Can be configured for equipment maintenance status display and network status display
 - Can be integrated with more than one AEROMET system to be establish a centralized of several system in GIS MAP based or/and TCP/IP data streaming
 - Data Sync capability to recover missing data due to communication
 - Advanced regular expression parser to collect data from intelligent sensor

Real-Time Web Based GUI:

AEROMET is a web based system where the information can be accessed, viewed and configured via web browser. The features of the web GUI comprises of Real Time Display Module, Data Query Module, Process Control Module, Profile Module and Setting Module. The display can be fully customized in term of type of data output, colors and graphic designed.

- ✔ Easy monitoring interface and reliable data
- ✔ High-tech & new technology (no JAVA)
- ✔ Designed for Real-time Weather Solutions

Please contact us for a complete listing. (Software Specifications)
